TaxWebb

— System specification

The Swedish National Forest Inventory has the task of describing the state and changes in Sweden's forests. Every year an inventory is undertaken on ca 11 000 sample plots and information about hundreds of variables is collected. This information is used, for example, as a basis for forestry, energy and environmental policy in Sweden. Data from the Swedish National Forestry Inventory is part of Sweden's official statistics.

Taxwebb is the Swedish National Forestry Inventory's interactive analysis tool.

System specification for TaxWebb

Web browser

TaxWebb works best with Internet Explorer (version 9 or newer, Edge) and the latest version of Google Chrome.

Hardware and operating system

TaxWebb works with PCs running Microsoft Windows and Mac OS.

To save your report as an excel file requires Microsoft Excel (version 2007 or newer) or other software compatible with Excel.

Mobile units

TaxWebb works with windows based tablets (Windows 8 or newer).

With I-pads (IOS) the "drag and drop" functionality does not work and you need to use "Add to." to change variables and measures.

TaxWebb does not work on smartphones.

A world class university

The Swedish University of Agricultural Sciences has its main locations in Alnarp, Skara, Umeå and Uppsala.
